

Award Recipients

Congratulations to current and former CACHE Trustees and CACHE members who received awards for their contributions in the field of Chemical Engineering.

John Falconer received the Lifetime Achievement Award in Chemical Engineering Pedagogy from the Chemical Engineering Division of ASEE. This award recognizes a lifetime of achievement in pedagogical scholarship and contribution to chemical engineering education.

Several current and former CACHE Trustees received recognition at the Fall AIChE meeting. For a full listing of award winners, descriptions of the awards, and bios of the winners, visit:

Rex Reklaitis received the AIChE Warren K. Lewis Award “for outstanding research and educational publications, and leadership of professional societies, journals, research organizations, and Purdue’s School of Chemical Engineering.”

Phil Westmoreland received the AIChE Institute Award for Excellence in Industrial Gases Technology “for quantitative and mechanistic insights into gas pyrolysis, combustion, and industrial chemistry through measurement and modeling, especially of hydrofluorocarbons and aromatic pollutants.”

Rakesh Agrawal was the 2017 recipient of the AIChE Chi Sigma Award “for synthesizing wide-impact energy processes, developing solution-based routes to fabricate low-cost solar cells, and pioneering a systematic method for the synthesis of multicomponent distillation trains.”

Jim Rawlings received the AIChE William H. Walker Award “for seminal contributions in the areas of control theory and applications, chemical reaction engineering, and modeling and control of crystallization processes.”
