

Comments from the Editors

This issue of CACHE News features a variety of articles on educational computing, with an emphasis on process control courses. Two articles on undergraduate and graduate process control education that were presented at the CPC7 conference last year are included here, as well as two related articles that were published in the InTech Magazine of ISA in October, 2006. I think you will find these articles to be quite interesting and hopefully they will stimulate discussion among faculty who teach process control and related courses. There is also an article on the Virtual Control Book that is being developed under a CACHE Task Force, and a short report on the NSF Cyberinfrastructure Workshop, which was chaired this past fall by Jim Davis of UCLA. Finally we have reprinted two CACHE Newsletters from the 1970s, so you can remember the way computing used to be done in the “old” days.
