

Comments from the Editors

This issue of CACHE News Online is notable both for what it contains and for what it does not contain.

It contains a variety of contributions covering such topics as Computational Fluid Dynamics, Process Control, an attractive program (free for academics) for Solving Differential Equations as well as Peter Rony's latest contribution on Chemical Microengineering.

The Editors would like to invite all CACHE member Departments to submit news that other colleagues may find of interest. Such news could include announcements of new faculty, installation of new computer equipment, software that has been developed or adopted, faculty/department awards, significant research awards, or faculty retirements.

The Editors would also like to invite contributions to the Reflections Column. This column is intended to give the contributor an opportunity to give his/her musings about new developments or comments on any aspect of chemical engineering.

We hope that you enjoy this issue.

Scott Fogler, Peter Rony, Edward Rosen
