

## News from the Process Engineering Task Force

Due to the changes that have taken place in the marketing of academic software, the Process Engineering Task Force has been dissolved.

Most academic software is now marketed and supported by outside vendors. As a result the need for CACHE to market and distribute selected software packages is slowly disappearing.

Process Engineering software which is currently being distributed by CACHE will continue to be distributed. CACHE has formed a new committee to set directions for the future in this area called Software Engineering, and is co-chaired by Trustees Tunde Ogunnaike and Ross Taylor.

CACHE News Online encourages software listings which are of direct interest to chemical engineering departments.
