New Version of POLYMATH 4.1 Now supports Windows printing and graphic files for documents

The most recent upgrade of POLYMATH is now available from CACHE. Site license users will receive this new version. This 4.1 version of POLYMATH is still a DOS program, but it creates Windows Meta files (WMFs) that can be conveniently printed or entered into documents. Special MetaFile Print programs for Windows 3.X, 95, 98, and NT normally print the POLYMATH WMF files that are generated upon printing requests from within POLYMATH. These generated WMFs are also made available for insertion as graphic files into word process and desk top publishing documents.

Work is continuing on a completely Windows-based POLYMATH with a new user interface which retains the current calculational capabilities. This Windows version is expected in the summer of 1999.

Version 4.02 is also now available for DOS operating systems with on-board printer drivers.

Educational licenses: If you decide to obtain POLYMATH for testing (see form below), please be aware of the following:

1. You may reproduce the program as many times as you like for students and other faculty.
2. Your department chairman will be informed of the testing.
3. If you decide to use POLYMATH in your department after 3 months, your department will be billed for \$125, and \$75 for each successive year thereafter. This fee covers any updates or new versions. Nonmember institution rates are an initial \$150 and a \$100 annual fee.
4. If you decide not to use POLYMATH after 3 months, you must erase all copies utilized on your departmental computer systems and networks.

Industrial site licenses are \$300 with an annual fee of \$200. This includes distribution, computer laboratory use, and unlimited personal computer copies to employees.

Individual student copies are \$25 each.
