

Comments from the Editors

Tom Edgar, Peter Rony, Ed Rosen, and Scott Fogler

CACHE News issue No. 58 (Spring, 2004) includes four interesting papers from a session at the AIChE San Francisco Meeting (“New Technologies for Experimentation Over the Internet”). In addition, two presentations by Jim Davis of UCLA and Tom Edgar at UT-Austin discuss the role of cyberinfrastructure from the AIChE New Orleans Meeting in April, 2004 (“Information Technology Education in Chemical Engineering”). Both Professors Davis and Edgar have held CIO positions at their universities.

There is also a nice mix of articles on computation in chemical engineering and application articles on VBA, GAMS, and FEMLAB.
