

## **CACHE Launches New Website**

**Blake Rawlings**

The CACHE website has recently undergone an upgrade that not only includes a new look, but will also change the way the site is operated. The recent changes to the CACHE web page will make it easier to manage, helping to ensure that it remains up to date. The transition to Wordpress as a content management system provides access to a wide range of plug-ins that make it possible to automate the tasks involved in maintaining the website. In addition, it will be possible for members of CACHE to add and update pages so that they reflect changes in the field. The changes to CACHE.org should result in a better, more consistent user experience throughout the site. The new website is being developed with the assistance of University of Texas students Ivan Castillo and Blake Rawlings.
