Special Issues from CACHE-Sponsored Conferences/Events

Special issues related to two CACHE sponsored conferences were recently published. A special issue covering selected papers from FOPAM 2019 was recently published in *Computers & Chemical Engineering*:

https://www.sciencedirect.com/journal/computers-and-chemical-engineering/special-issue/106H17BHZ44

The articles cover algorithms, software, and application areas including to oil refining, 3D printing, electricity generation, molecular simulations, and batch processing. The contributions come from both academia and industry. This special issue was edited by Venkat Venkatasubramanian.

Furthermore, the event held for celebrating the 50th anniversary of CACHE also included a number of exciting presentations. The authors of some of these talks were asked for contributions to a special issue that was recently published in *Chemical Engineering Education*:

https://journals.flvc.org/cee/article/view/122273

The primary focus of the conference was to bring together thought leaders, innovators, educators and industrial practitioners to explore and discuss future directions in the use of computing technology, data science, and the internet-based communications infrastructure to enhance chemical engineering education. A secondary focus was to review and celebrate the accomplishments of CACHE over the last 50 years in supporting educational and research innovations. This special issue was edited by Wayne Bequette.
