

## Comments from the Editor

This issue of CACHE News features two symposia that were recently held: the CACHE session at the 2009 AIChE meeting in Nashville, TN and the CACHE 40<sup>th</sup> Anniversary Symposium held this past summer in Boulder, CO. The AIChE meeting includes Brice Carnahan's ASEE Award lecture and provides a snapshot of a recent CACHE-sponsored conference (FOSBE) plus the activities of several task forces (Molecular Modeling, Computational Fluid Dynamics, Fuel Cells, and POLYMATH). The CACHE Anniversary Symposium provides a retrospective of chemical engineering computing and CACHE's involvement especially in educational computing. Future directions are also covered in several presentations. Finally, several papers discuss fuel cell modules, a global warming model, educational modules on protein design, and video lectures from the 2008 Annual AIChE meeting.

Three new trustees of CACHE Corporation are introduced: Wayne Bequette, Mahmoud El-Halwagi, and Ed Maginn.
