

Computing and Games in the ChemE Curriculum A Development Workshop

Marcel Liauw, Margot Vigeant DMs

AICHE Annual Meeting, November 2013
San Francisco

Edited to include workshop developments & participants

Schedule

- Greetings and Goals (15 min)
- A Vision (15 min)
- Show and Tell (30 min)
- Worktime (30 min)
- Report out and next steps (15 min)

Greetings & Goals

- What games exist in ChemE?
- Meet potential collaborators for current ideas
- Encourage professors to implement games
- What are the effective features of games?
- What is the game trying to *do*?

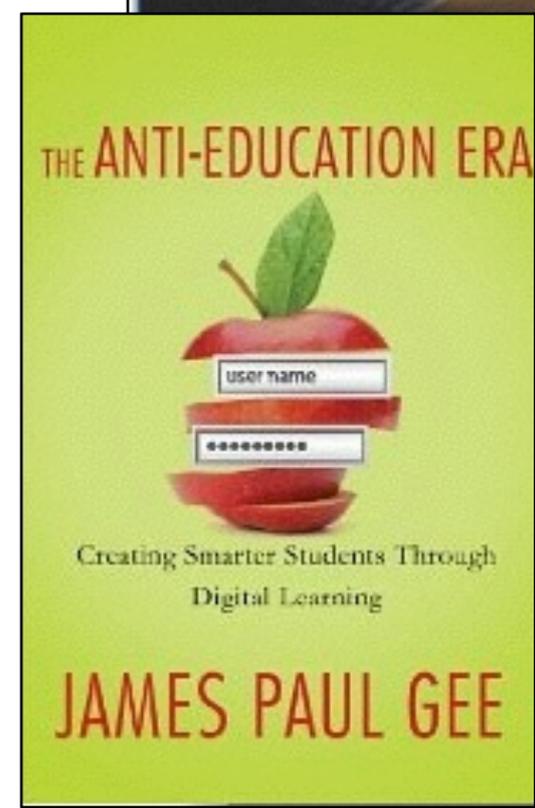

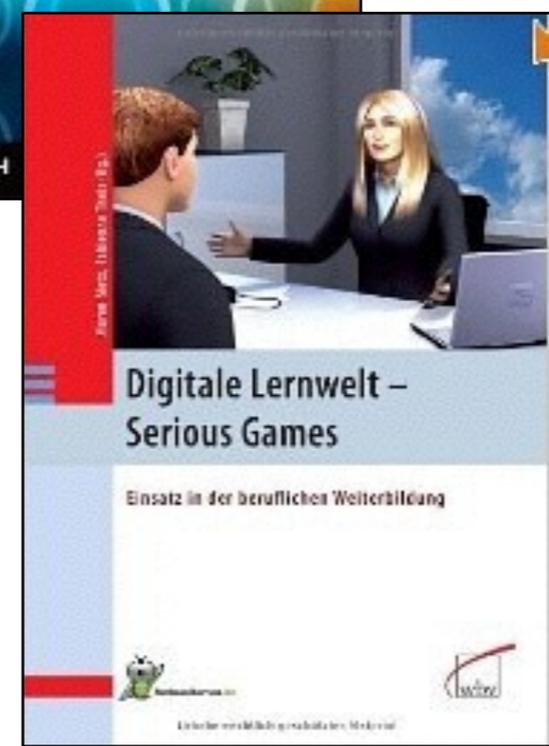

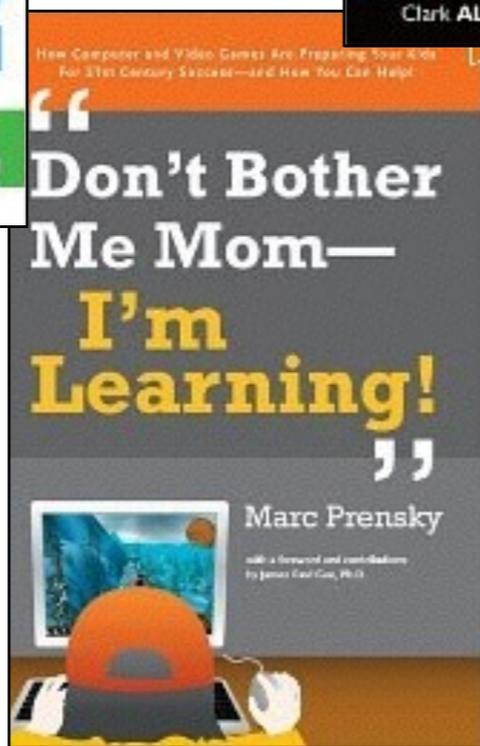

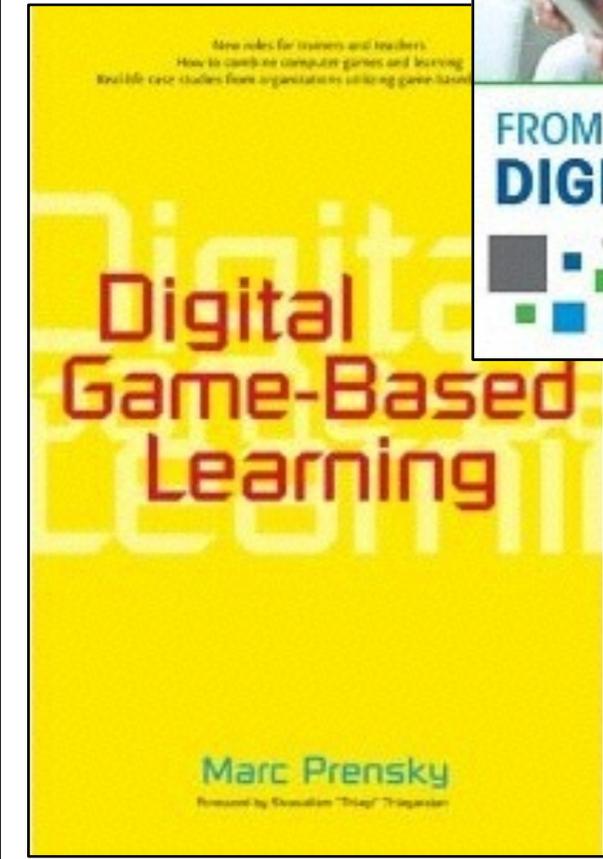

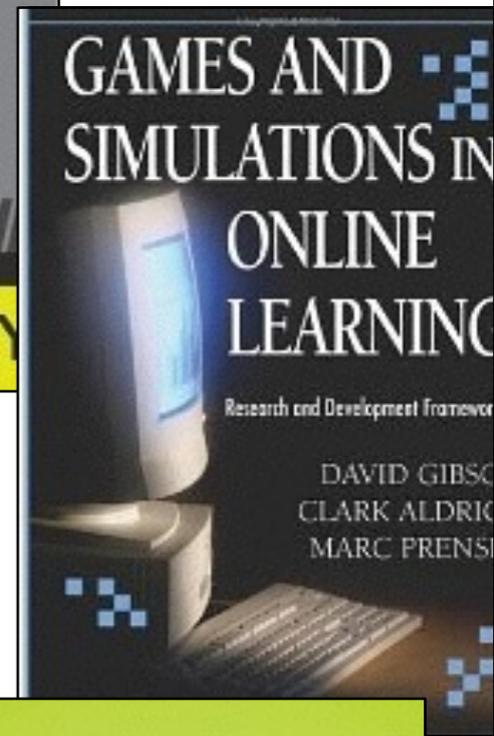

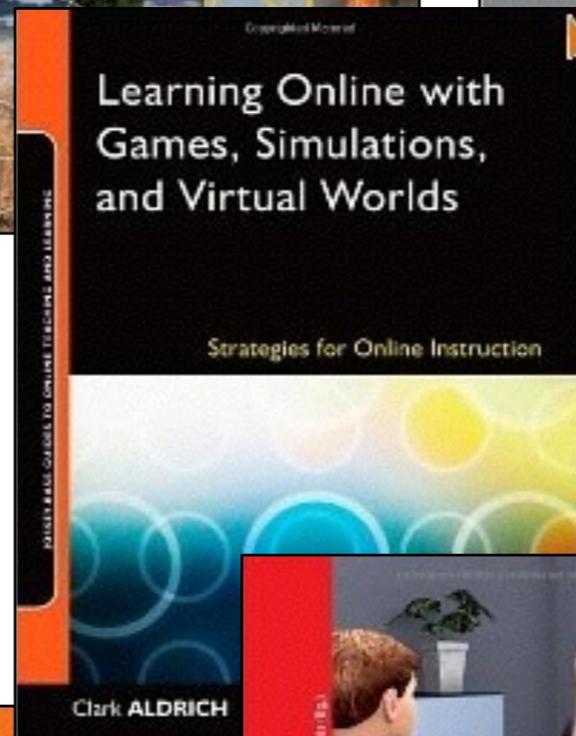

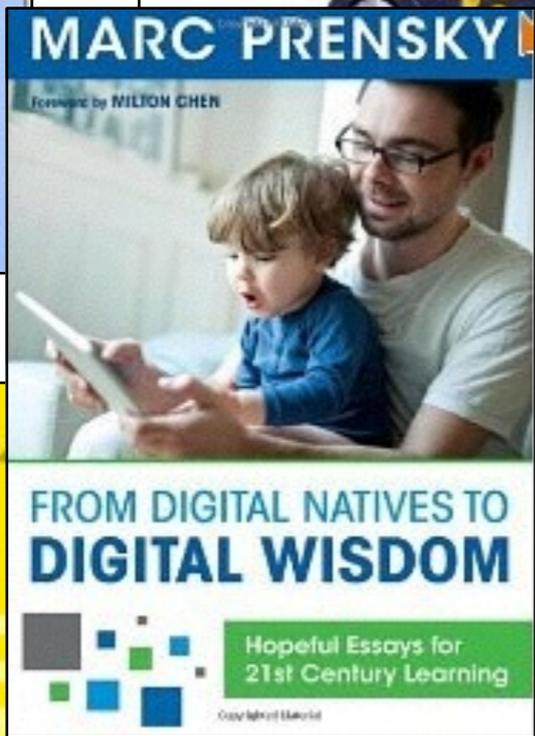

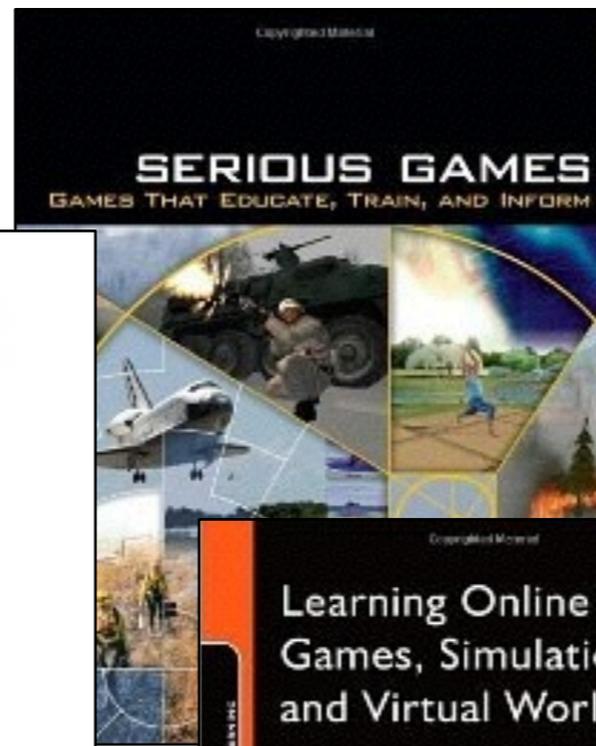

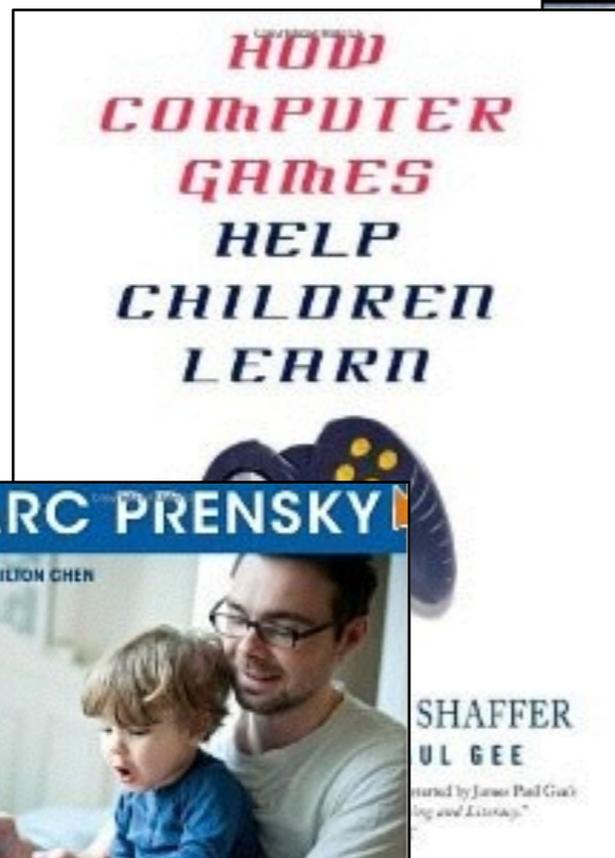

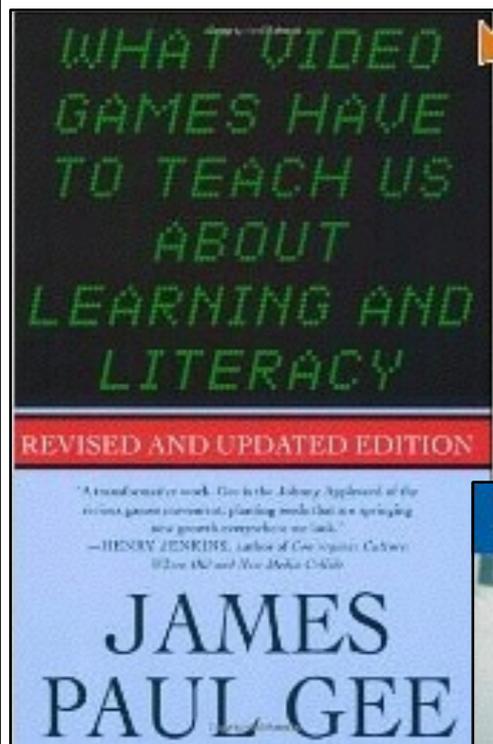

Workshop

Computing and interactive games in the curriculum

Digital Natives learning...

GBL references

Die Rettung der Zink & Co.

i.e. „Saving Zinc Inc.“

by Volker Deringer, Steffen Heddrich, Marcel Liauw

What?

- **Game**
- *Designed environments with rules where players make choices that move them towards a goal state.*
- **Gameification**
- *The process of applying game-thinking and game-dynamics, which make a game run, to the non-game context in order to engage people and solve problems**

Why?

Creativity Contentment Awe&Wonder Excitement
Curiosity Pride Surprise Love Relief Joy

*Jane McGonigal EDUCAUSE 2013 & "Reality is Broken"

Competency Based Education

The New York Times

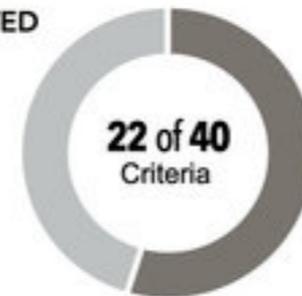

November 3, 2013

BUS3020:

Fundamentals of EBusiness - Spring 2013
Instructor: [John Smith](#)

YOU HAVE COMPLETED

19
CRITERIA, towards
32
TOTAL CRITERIA

YOU HAVE COMPLETED

5
ASSIGNMENTS, out of
10
TOTAL ASSIGNMENTS

YOU HAVE **6** COMPETENCIES in this course

■ NON-PERFORMANCE ■ BASIC ■ PROFICIENT ■ DISTINGUISHED

Students in Capella University's FlexPath program can see how many criteria they must complete to achieve each competency. Colors indicate how well the student is doing.

Show & Tell

Demos
Descriptions
Play-Testing

Summary of Show and Tell

- **Kevin Hadley** from SDSM&T - Pandemic for team building
- **Dan Anastasio & Daniel Burkey** from UConn - Seniors vs. Zombie gamification
- **Ulrich Schacht** from Strathclyde University - Game of design for teamwork and project management
- **Milo Koretsky** from University of Oregon - Multiple simulations of industrial process - “game” of internship
- **Cheryl Bodnar** from University of Pittsburgh - Games and Gamification of courses; ChemE application of D. Schaffer’s epistemic games.
- **Marcel Liauw** from RWTH Aachen University - Development and use of a laboratory and experimental simulation game.
- **Margot Vigeant** from Bucknell University- Lab simulation experiment as game

What is this Good For?

- **GOOD**
- Motivation
- Concepts
- Better memory, connection to images
- Accesses what students do already (converge!)
- Affirmation
- Improves memory of the class itself (if not the material)
- Opportunity to situate learning in real contexts
- Simulate things they can't really do
- Learning over the course of the semester (not cramming)
- Rewarded for learning things that might not jump out of the text
- Students get more ownership
- Promotes teamwork
- Instant feedback, Adaptive feedback
- Addressing students differently

Not so good

- Students who will game the game (exploit)
- A competitive classroom can be negative
- Need good assessments to prove this is actually working
 - What level of Bloom's are we at
- Games should have an optional element
- Difficult to get it accepted by the non-gamified world (this may be getting better with time)

What do we want to tackle?

- Fugacity: the game
- How to do *basic research*
- Design of an active pharmaceutical compound and its reaction and purification train
- Turning a simulation (ASPEN, ChemCAD) into a game
- A game of ChemE (4-year long)
- Methods to assess outcomes from games

Work Time

Grouping
Working
Report

Design Elements

- **Game**

- Story
- Environment
- Goal state
- Rules

- **Gameify**

- Setting
- Level requirements
- Badges
- Monitoring
-

Report Goals

- Educational Outcome
- Setting
- Approach (game or gameify or)
- Game elements
- Needed tools/tech/resources
- Evaluation approach

fugacity

GAMIFY → Level 1: Ideal Gas
State IGL

$\frac{1 \times y}{Data}$ → Fit w/ Raoult's Law ^①
Score α r^2
Fit w/ 1-Marquies
2-Marquies ...

Unlock Models
— Assume

| Stuff | Model |
|--------------------------|-------------------|
| Simple stuff | IGL Raoult's Law |
| | Ideal Soln |
| Complex stuff | Mod Raoult's Law |
| | Excess Properties |
| IONS Polymers etc. | |

If you assume,
ideal solution, turn to
Page 15

↓ You fool!
20 bar!!
Duh!

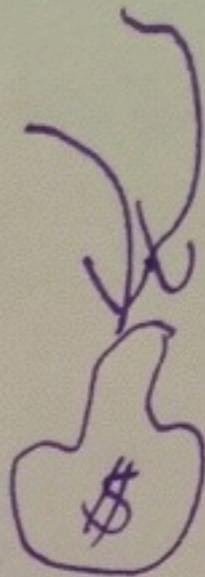

Choose your own
Thermodynamic Model
Adventure

SIMULATION

OIL TAXON
- SIM CITY + ASPEN

Real
TIME
OPTIMIZATION { COST
MAINTENANCE
MANAGEMENT

EX. DIST. COL.
FUNDAMENTALS + CASHFLOW

4-year game

→ Competencies

↓
Concept Inventories

→ "Talent Trees"

"Specializations / Minors"

Benefits

- Create engagement early
- Create camaraderie early
- Learn about CHE early

Requires

- Very good mapping

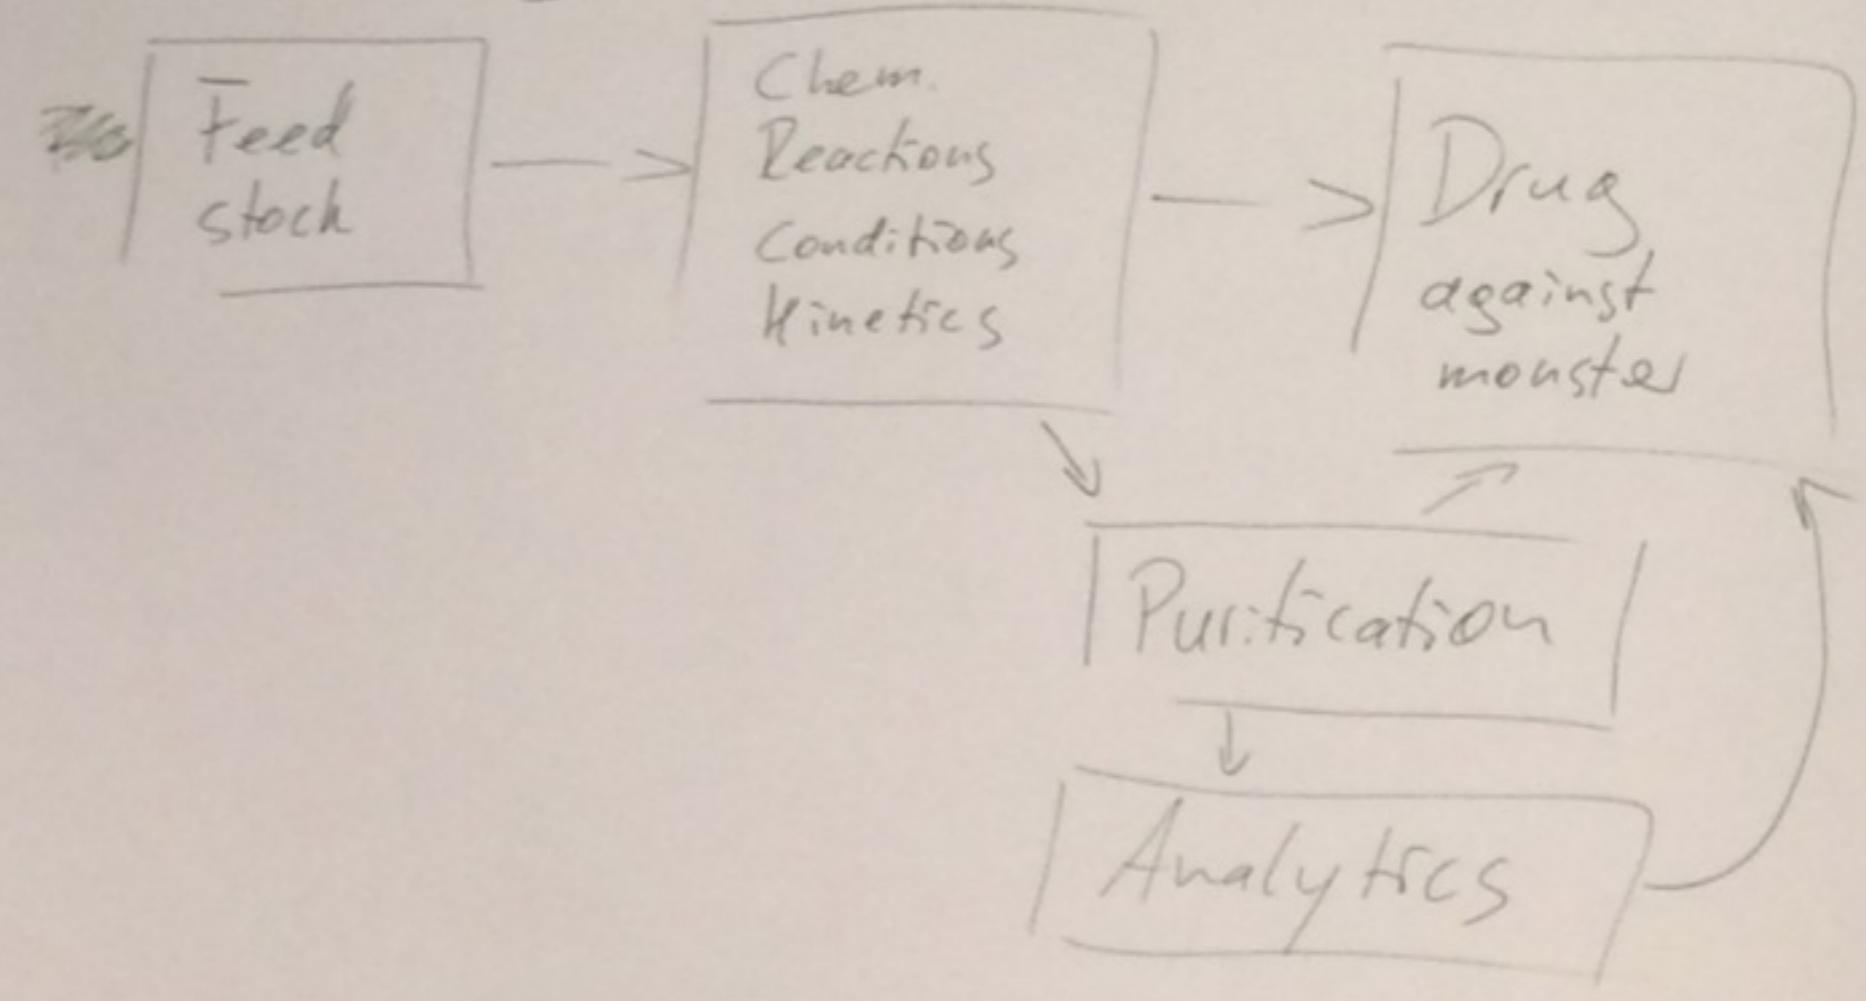

→ Adaptive Assignments - progressive competencies

Design an API: reactions to purification

* Howard-Syrum (Boehringer-Ingelheim)

You are a pharma company to develop new drug

* Develop drug against monsters

Next Steps?

“It is not difficult to imagine a school of the future as a ‘laboratory school’ - a school making massive use of educational simulation games, laboratory activities, and creative projects - a school in which almost everything to be learned is manipulated, physically or mentally.”

Clark Abt, Serious Games (1970)
